WEB APPLICATION SECURITY AUDIT (SAFE TO HOST) CERTIFICATE

Organization Name	: Hamsa Soham Health Care Pvt Ltd
Full/Entire Application Security Tested	: No
M1 & M2 APIs Tested	: Yes*
API Name	: ABHA M1 & M2 APIs v3 Integrated into HAMSA Web Application v1.0
Temporary Application URL	: https://47.247.56.34/DEMO/index.xhtmll
Production URL	: https://localhost/index.xhtmll
Security Testing Start & End Date	: June 02, 2026 to June 09, 2026
Audited By	: Subodh Tirpude (infosec@sumasoft.net / +91.20.40130400)

***Suma Soft did not test Full/Entire Application, This Vulnerability Assessment & Penetration Testing is limited to ABHA Milestone(M1) & Milestone 2 (M2) APIs Integration module and its related components only.**

Observation: The above mentioned ABHA M1 & M2 APIs v3 Integrated into HAMSA Web Application v1.0 has undergone Vulnerability Assessment & Penetration Testing and has been certified to be safe from the known vulnerabilities. The contents audited were based on the web application URL mentioned above.

Conclusion: We have tested the ABHA M1 & M2 APIs v3 Integrated into HAMSA Web Application v1.0 for OWASP Web Top Ten 2025 vulnerabilities. They said web application is free from OWASP Top Ten known vulnerabilities and is safe for hosting as on date of submission of the security certificate. The Web Application has dynamic content meant to be available to Authorized users only.

MD5 for Root folder (Zip): 45a62e13273e8363594e1a1d03fe58ba

Recommendations:

1. The Web may be hosted with limited privileges (Without Administrator/Root) of Read and Script Execution permissions.
2. Operating System, Web Server and Database Server hardening needs to be in place for the production server along with encrypted transport layer (SSL) protection.
3. Use the latest version of software technology in the production environment with OEM recommended patches

Note - The security certificate is valid for 1 year from the date of issuance, given that no dynamic changes are made to the API/Web source code. If any alterations, such as modifications to the API/Web code or system configuration, occur, the organization is required to conduct a subsequent VAPT/Security Testing specifically for the modified portion of the APIs/Web.
